What Materials Are Shed Solutions Sheds Made Of?

1. Getting Started · https://www.shed-solutions.com/docs/getting-started/what-materials-are-shed-solutions-sheds-made-of.html

LP SmartSide Siding

We build our sheds using LP SmartSide engineered wood siding -- a premium product designed to resist rot, insects, and harsh weather. LP SmartSide combines the natural look of wood with significantly better performance and lower maintenance than standard wood siding.

Structural Framing & Roofing

The structural framing uses dimensional kiln-dried lumber throughout. Roofs are finished with durable architectural asphalt shingles rated for Canadian climate conditions -- the same product used in residential home construction.

Floor System

Our sheds feature a pressure-treated wood floor frame with 5/8" pressure treated subfloor decking, providing a strong, stable surface suitable for storing heavy equipment and riding mowers.
