How Do I Winterize My Shed?

7. Maintenance & Care · https://www.shed-solutions.com/docs/maintenance-care/how-do-i-winterize-my-shed.html

Before Freeze-Up

- Check and re-caulk any gaps in trim, corners, or around windows and doors
- Ensure the roof is clear of debris before snow season
- Check that door latches and locks are in good working order
- Safely store or remove any chemicals that shouldn't freeze (fertilizers, paint, etc.)
- If the shed is insulated or heated, inspect weatherstripping around doors

Managing Snow on the Roof

Our roof designs are engineered to handle normal Alberta snow loads. After an unusually heavy snowfall:

- Use a roof rake to remove heavy accumulation -- avoid sharp tools that could damage shingles
- Ensure snow is not banking up against the walls
- Check that eaves and overhangs are not clogged with ice buildup
