What Roofing Material Do You Use?

2. Products & Materials · https://www.shed-solutions.com/docs/products-materials/what-roofing-material-do-you-use.html

Architectural Asphalt Shingles

We use architectural (laminated) asphalt shingles on all our sheds. Asphalt shingles are the industry standard for Canadian residential construction, offering excellent performance in cold weather, snow, and UV exposure.

Performance & Longevity

Asphalt shingles come with manufacturer warranties typically ranging from 25-30 years. They are durable, low-maintenance, and come in a range of colours to complement your shed's exterior paint.

Snow & Cold Performance

Our roof pitches are designed to shed snow effectively. The shingles we use are rated for sub-zero installation and performance, so you don't need to worry about cracking or failure during Alberta winters.
