What Should I Check During My Spring Inspection?

7. Maintenance & Care · https://www.shed-solutions.com/docs/maintenance-care/what-should-i-check-during-my-spring-inspection.html

Spring Is the Best Time for an Annual Check

After each Alberta winter, take 10 minutes to walk through this checklist:

- Inspect the exterior for paint cracking, caulking separation, or siding damage
- Check roof shingles for any winter damage -- look for cracked, curled, or missing shingles
- Inspect the floor inside for signs of moisture or movement
- Lubricate door hinges and check door alignment
- Clear winter debris from around the base of the shed
- Ensure drainage around the foundation is flowing away from the shed

Tip: *Catching small issues in spring -- like a crack in the caulking -- is much easier and cheaper than dealing with water damage later in the season.*
