My Shed Looks Like It May Have Shifted — What Do I Do?

8. Troubleshooting & Repairs · https://www.shed-solutions.com/docs/troubleshooting-repairs/my-shed-looks-like-it-may-have-shifted-what-do-i-do.html

Some Settling Is Normal

Minor settling in the first year is expected, especially after a hard frost-and-thaw cycle. This can cause very slight movement in the base pads.

Signs That Need Attention

- The shed appears noticeably tilted
- Doors are binding significantly or won't latch
- There are visible gaps between the floor and walls

What to Do

Contact us if you're seeing any of the above signs. In most cases, levelling is a straightforward adjustment of the concrete pavers and wooden blocking. We'll arrange a site visit to assess and correct it.
