How Do Your Sheds Perform in Canadian Weather?

2. Products & Materials · https://www.shed-solutions.com/docs/products-materials/how-do-your-sheds-perform-in-canadian-weather.html

Built for Alberta Conditions

Our sheds are designed specifically for Alberta's climate. Key performance features include:

- Roof pitch engineered to shed snow effectively
- LP SmartSide resists moisture and freeze-thaw movement
- Asphalt shingles rated for sub-zero temperature performance
- Pressure-treated floor framing to resist ground moisture

Snow Load & Wind Rating

Our sheds are constructed to meet Alberta Building Code standards for residential accessory structures. Specific load ratings vary by size and design. Contact us if you need engineering documentation for a permit application.

What You Can Do to Help

After major snowfalls, clearing excessive snow accumulation from the roof is a good practice. Ensure good drainage around the shed foundation to prevent water from pooling against the base during spring thaw.
